

A scatter plot showing the relationship between a parameter p (x-axis) and a binary outcome (y-axis). The x-axis ranges from 0.65 to 0.90, and the y-axis has labels 0 and 1. Blue dots represent the majority of the data points, which are clustered at y=0 for p values between approximately 0.64 and 0.91. Orange dots represent a smaller subset of the data, located at y=1 for p values around 0.68, 0.83, and 0.89.

A scatter plot showing the relationship between the variable 'p' (x-axis) and the 'label' (y-axis). The x-axis ranges from 0.62 to 0.78, and the y-axis ranges from 0 to 1. Most data points are blue circles at label 0, while two points are orange circles at label 1.

p	label
0.632	0
0.647	0
0.648	1
0.664	0
